OBJECTIVE PROFESSIONAL PROFILE

Proactive developer and entrepreneur with hands-on experience in Python back-end development, Object oriented programming using different languages such as python, C++, and JavaScript, data management, and building scalable digital solutions. Skilled in developing RESTful APIs, working with relational databases, automating data workflows, and applying data structures and algorithms to solve real-world problems. Experienced in supporting organizational systems through technical troubleshooting, database maintenance, and web updates. Expert at using Git, SQL, with C++ and Python-driven tools to build efficient applications, improve data quality, and support decision-making processes. Currently pursuing Bachelors degree in Business information and technolgy with also data science at ALX with commitment to delivering reliable, well-engineered solutions across backend, data, AI and QA domains. In addition I combine technology and data skills with several years of community leadership, mentorship, youth engagement and connecting people to opportunities.

EDUCATIONAL BACKGROUND

Bachelor of Science in Business Information and Technology
University of Rwanda | Huye, Rwanda | September 2024- June 2028
Current CGPA: 79% Equivalent to 4.4At UR
Relevant Coursework: Database Structure and Algorithms, Python and Database Programming, C++ and object oriented programming, Networking, Enterprise Web Development, and Communicating for impact.

Advanced Level Certificate (A2 Diploma)
National Examination and School Inspection Authority (NESA) | Rwanda | January 2017 - August 2023
Combination Courses: History Economics and Geography
Grades: 58/60

WORK EXPERIENCE

Software Developer — Umurava AI Hackathon (MPACT Project)
Hackathon Team Project | Rwanda | 2025
● Collaborated with a development team to design and build MPACT, an AI-powered recruitment and applicant screening platform.

- Contributed to backend development including applicant management workflows, job processing,

and resume handling systems.

● Worked on AI-assisted recruitment features including resume evaluation, job description extraction, and candidate ranking using Gemini 2.5 Flash Lite.
● Participated in designing system architecture, database structure, and core application workflows using SQLite and PostgreSQL.
● Contributed to development of features such as PDF resume uploads, CSV import/export, and automated applicant tracking.
● Applied object-oriented programming, problem-solving, and team collaboration in a fast-paced hackathon environment.

Founder & Community Lead
Women Deserve Better | Bugesera District, Rwanda | 2020 – Present
● Founded a community initiative focused on empowering women and girls through education, mentorship, and leadership development.
● Organized weekly community sessions creating safe spaces for women to build confidence, share experiences, and develop personal growth skills.
● Mentored young girls and established a school-based club promoting education, leadership, and career awareness.
● Led awareness activities encouraging families to support girls' education and reduce gender inequality in rural communities.
● Advocated for digital literacy and the use of technology as a tool for empowerment and social change.

Co-Founder

Youth Employment and Skills Program (YSEP) | Rwanda | 2025 – Present

● Co-founded a youth-focused initiative aimed at reducing unemployment through skills training, mentorship, and job opportunity access.
● Contributed to the design of a digital platform connecting youth to internships, job opportunities, and career guidance resources.
● Defined key platform features including job matching, internship applications, mentorship access, and opportunity notifications.
● Participated in developing the MVP structure, user experience flow, and overall product vision.
● Contributed to business model design including training programs, employer partnerships, and employment support services.
● Collaborating with a team to build a scalable solution addressing youth unemployment in Rwanda.

Founder

Mugisha`s Family fam produce |Rwanda| 2019 –Present

- Founded and managed a small agribusiness to generate income for school tuition, family support, and personal expenses.
- Expanded the business by partnering with local small-scale farmers, creating a reliable market for their produce and ensuring fair pricing.
- Connected fresh farm produce to local markets, increasing product variety while improving income opportunities for farming households.
- Organized informal workshops for youth and community member on sustainable farming practices to improve crop yields and productivity.
- Led community partnerships and coordinated with local farmers, strengthening collaboration, communication, and trust within the farming community.
- Created positive social and economic impact by empowering local farmers, promoting self reliance , and fostering community development through agriculture.

PROJECTS

Personal Portfolio Website

Tech Stack: HTML, CSS, JavaScript, Git, GitHub

Live Demo:https://kayishema1.onrender.com/

GitHub: https://github.com/mugishakayishema/Kayishema-portfolio

- Developed a fully responsive, mobile-friendly personal portfolio to showcase engineering projects and technical skills.
- Implemented modular JavaScript components and organized code structure for maintainability.
- Utilized Git/GitHub version control, project management, and deployment workflow.

Umurava AI Hacktone

Tech Stack: Flask, Python, SQLite, PostgreSQL, Tailwind CSS, HTML, JavaScript, Git, GitHub, Gemini 250 Flash lite,

Live Demo: mpact.up.railway.app

GitHub: https://github.com/PrincipieCyupe/MPact

- Built and deployed a platform that enable Recruiter to screen different candidates with limit time using Gemini Ai.
- Implemented backend logic for authentication, user management, resource access, and submission workflows.
- Integrated relational databases (PostgreSQL for production, SQLite for local development) to support scalable content and user data.

COMMUNITY LEADERSHIP & VOLUNTEERING

COMMUNITY LEADERSHIP & VOLUNTEERING

Founder & Community Lead
Women Deserve Better | Bugesera District, Rwanda | 2020 – Present

● founded a community initiative focused on empowering women and mentoring young girls to challenge gender inequality and pursue education, leadership, and personal development opportunities.
● Organized weekly community discussions and mentorship sessions in Rilima Sector, creating safe spaces for women and girls to build confidence, share experiences, and strengthen leadership skills.
● Led awareness initiatives encouraging families to support girls' education and participation in

Community development activities.

● Established a high school mentorship club that guided young girls in academic growth, self-confidence, and long-term career aspirations.

● Advocated for the use of technology and digital literacy as tools for social and economic empowerment in underserved communities.

● Developed leadership, communication, public speaking, and community mobilization skills through grassroots advocacy and youth engagement initiatives.

AWARDS & RECOGNITION

- **ALX Alumni** | 2026 Completed an intensive parthway program of inspiring, empowering and educating students especially high school graduates to equip them Century with skills and technology , to apply them and solve some community problems. the program led by ALX in partnership with MasterCard Foundation.

TECHNICAL SKILLS

- **Programming Languages:** Python, JavaScript, C++, SQL, HTML, CSS
- **Object Oriented Programming with C++, python and JavaScript:** Building scalable apps and programs using this kind of modern programming which makes easy to control codes and maintain.
- **Backend Development:** Flask, FastAPI, RESTful API Development, Authentication & Authorization, Server-Side Routing, CRUD Operations
- **Frontend Development:** React.js, JavaScript ES6+, Responsive Web Design, DOM Manipulation
- **Databases & Data Engineering:** PostgreSQL, MySQL, SQLite, Database Schema Design, Data Cleaning & Transformation, Working with Large Datasets
- **DevOps & Tools:** Git, GitHub, VS Code, Docker , Linux (command-line basics), Virtual Environments
- **Cloud / Hosting (Basic Experience):** Firebase, Web Deployment, Environment Configuration
- **Productivity & Other Tools:** Microsoft Office Suite, Google Workspace
- **System Analysis and Design**
